

LAB COORDINATOR POSITION AVAILABLE IN PRODROME/EARLY PSYCHOSIS

The Northwestern University *Adolescent Development and Preventive Treatment (ADAPT)* program is seeking applications for a research coordinator.

Currently we are running a number of protocols with typically developing, prodromal syndrome and early psychosis populations focusing on biomarker, treatment, and scale development. Join our team and be involved with collecting and writing up data from any and all of these great and innovative multimodal studies. Please see our website for more details: <http://www.adaptprogram.com>.

The successful applicant will join a team of project coordinators responsible for managing undergraduate research assistants, coordinating research projects (recruiting, scheduling, running participants), processing IRB protocols, managing finances, and analyzing and processing data. **This is the ideal position for someone interested in applying for graduate school in a year or two.** You will get in-depth experience in an active multidisciplinary team, learn skills, publish papers, attend conferences and make connections with a number of psychopathology groups. Details about wage and benefits, as well as the application process can be found at:

<https://www.northwestern.edu/hr/careers/index.html>. Please click on “external applicants” (about halfway down the page, under “Find a Job” and then on the next page, search for job opening #38273 and apply.

For questions please contact Vijay Mittal (vijay.mittal@northwestern.edu). Review of applications will begin right away, and we hope for the position to begin as soon as possible.
